

Rain changing to snow Mon: May end by evening with 1in snow

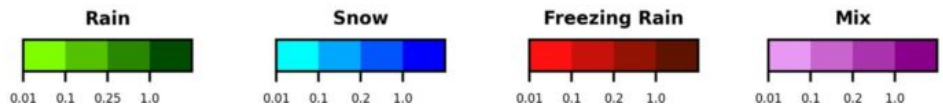

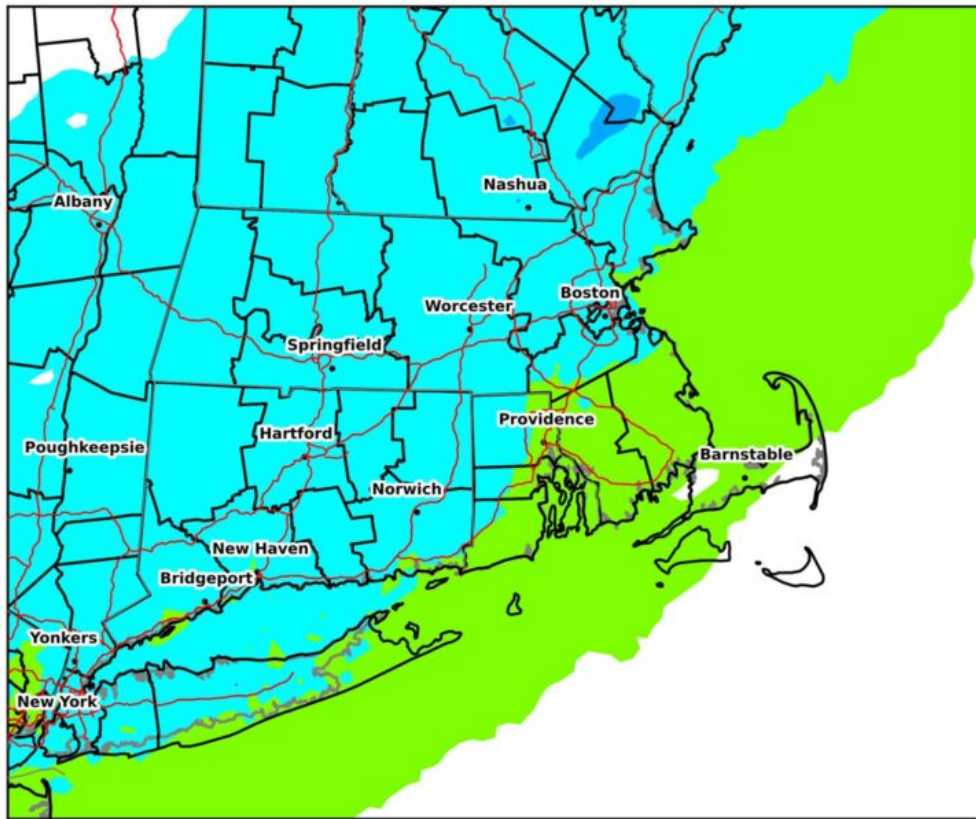

At Providence, rain likely changing to snow Mon afternoon, but temperatures about 35F preclude any chance of substantial changeover to accumulating snow, although an inch or so is expected.

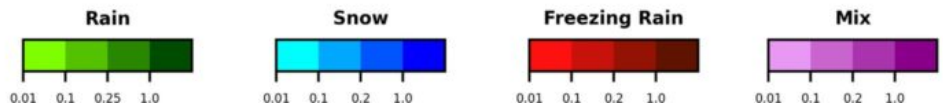

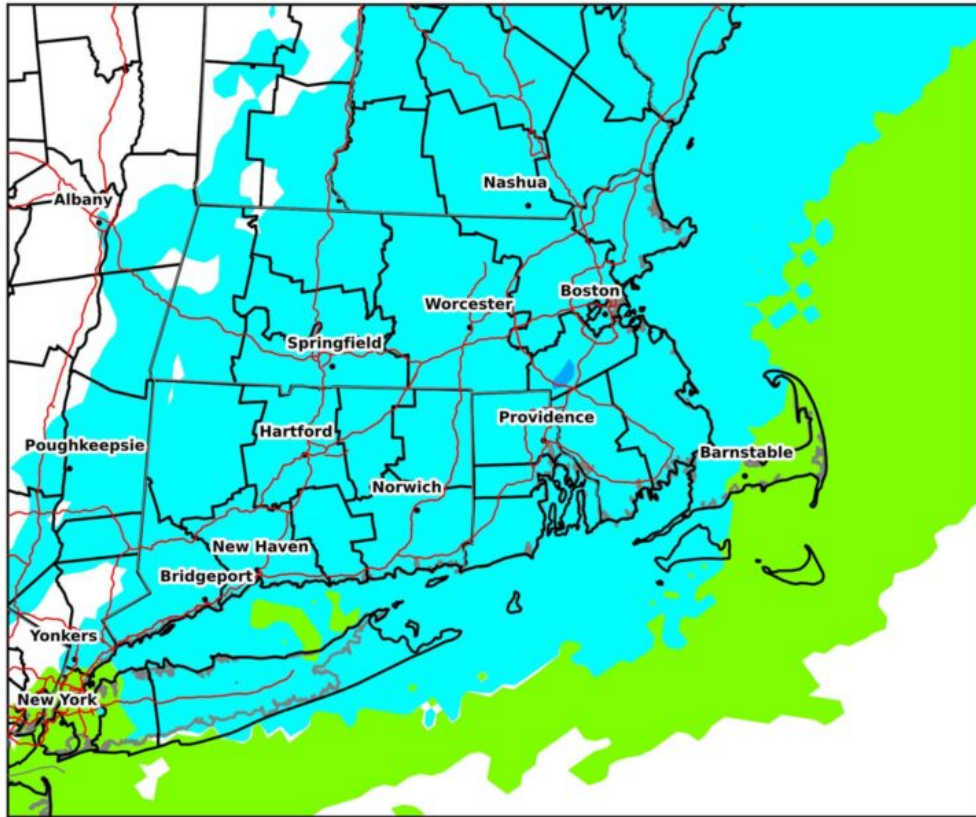

Rain has been observed to change to snow as of Mon 1:30pm, but temperatures will remain above freezing in the metropolitan area until about 8pm. Significant accumulation is likely to the north and west due to colder air and therefore an earlier changeover, from Burrillville through Worcester and Springfield, where Winter Weather Advisories have been posted.

Probability of accumulation at least 0.1in is 86%, 1in is 64%, 2in is 24%, and 4in near 0%.
